Product Overview

High-Performance Rotary Tiller Blade

These professional-grade rotary tiller blades are engineered from high-quality steel to provide exceptional hardness, resistance to deformation, and prolonged service life. Featuring precision thermo-forming and advanced heat treatment technology, each blade undergoes rigorous static and dynamic balancing tests to ensure reliable operation. Designed for compatibility with various tilling machines, these blades feature a specialized protective coating and shot-peened finish for superior rust resistance and durability in demanding agricultural conditions.

Technical Specifications

Manufacturing Features

- Automatic temperature control heating and tempering
- Proprietary gas-tempering for enhanced chemical composition
- Precision thermo-forming molds
- Static and dynamic balance testing

Material Composition

High Quality Steel, Uniform Internal Structure, High Strength

Surface Treatment

Surface Protection

- Electrostatic or water-based paint
- Added drying process for paint adhesion
- Automatic shot peening

Compatibility

Compatible Model Series
