

Rotary Tiller Blades for Wet Paddy Fields

These rotary tiller blades are designed for use in wet paddy fields. The curved blade design facilitates efficient soil turning and mixing.

Product Overview

Optimized for Wet Paddy Fields

These rotary tiller blades are specifically engineered for high-performance soil preparation in wet paddy field environments. Featuring a specialized curved geometry, the design ensures efficient soil turning and thorough mixing, which is critical for successful planting cycles. Crafted from hardened steel, these components offer excellent durability and resistance to wear, ensuring long-lasting performance in demanding, moisture-rich conditions.

Technical Specifications

Primary Application

Wet Paddy Fields

Material

Hardened Steel

Design Features

Curved Blade Profile, Wet Soil Optimized, Wear-Resistant
