

Rotary Tiller for Soil Preparation

This rotary tiller is a robust implement for efficient soil preparation in agriculture. It features adjustable tilling depth and high-speed rotating blades for creating a fine seedbed.

Product Overview

Professional Soil Preparation

The TL Series Rotary Tiller is a robust and efficient implement engineered for versatile agricultural soil management. Designed with a heavy-duty gearbox and high-speed rotating blades, it effectively pulverizes soil to create the ideal seedbed for planting. Its adjustable depth settings and broad tractor compatibility ensure reliable, customized performance for professional farming operations.
