

Rotating Machinery Moving Dolly

This machinery dolly features a rotating platform for enhanced maneuverability. It simplifies the installation process and is suitable for transporting heavy equipment.

Product Overview

Professional Rotating Machinery Moving Dolly

This rotating machinery moving dolly is engineered for the efficient transport of heavy industrial equipment. Constructed from high-grade steel with a durable spray-painted finish, it offers reliable performance for warehouse, factory, and construction site applications. The design features a rotating platform that allows for precise maneuvering, and the system is simple to install without requiring specialized training.

Technical Specifications

Available Variants

- Steerable machinery skates
- Mounted roller skids
- Rotating moving dolly
- Veered moving skates

Material	First-grade steel
----------	-------------------

Surface Finish	Paint spraying
----------------	----------------

Performance Features

Floor Protection

Non-floor damaging rollers

Load Capacity Range	Heavy duty, Small capacity
---------------------	----------------------------

Installation	Yes
