

Round Optical Sensor

This is a round optical sensor. It features a circular housing with a recessed lens area.

Product Overview

Precision Optical Sensing

This round optical sensor is designed for high-precision detection applications. Featuring a durable circular housing and a specialized dome-shaped lens, it offers reliable performance in various industrial environments. Its recessed lens design helps protect the optical components while maintaining a compact footprint for easy integration.

Physical Characteristics

Form Factor	Round
Housing Color	White
Lens Design	Dome-shaped, recessed

Device Type

Device Category

Optical Sensor • Electronic Component
