

Rubber Block Cutting Machine with Rotary Disc

This machine is designed for cutting rubber blocks of natural, reclaimed, and synthetic rubber. It cuts the rubber into blocks, slices, granules and strips.

ADDITIONAL IMAGES

Overview

The rotating-disc cutting machine effectively processes raw rubber blocks into uniform slices and granules.

Professional Rubber Cutting Solution

This rotating-disc cutting machine is engineered for the efficient processing of natural, compound, reclaimed, and synthetic rubber. It effectively cuts rubber blocks into smaller blocks, slices, granules, and bars, and is versatile enough for other material cutting applications. The machine utilizes a hydraulic system for smooth, controlled operation and features a robust design to ensure long-term durability and precision in industrial rubber processing environments.

Technical Specifications

Detailed view of the cutting guide plate, worktable, and hydraulic control box.

Performance Metrics

50 r/min

Blade Rotational Speed

5 Mpa

Working Pressure

Model Comparison Table

Specification	WQJ-1000	WQJ-1300
Blade Diameter	1000mm	1300mm
Power	4+2.2kW	4+2.2kW
Production Capacity	2t/h	3t/h

Key Features

The machine is capable of processing various rubber materials into diverse forms for industrial use.

Compatible Materials

- Natural Rubber
- Compound Rubber
- Reclaimed Rubber
- Synthetic Rubber

Capabilities

Hydraulic System, Rotating Blade, Reciprocating Worktable, Self-Lubricating Parts, Industrial Grade
