

# Rubber Caps for Processing Machinery

These rubber caps are designed for use in rubber processing machinery. The caps feature a forked top and a perforated, tapered body and come in assorted colors.

## Product Overview

### Industrial Rubber Caps

These professional-grade rubber caps are specifically designed for applications within rubber processing machinery. Featuring a distinct forked top and a perforated, tapered body, they are engineered to provide reliable sealing and protection. Their versatile design ensures compatibility with various machinery configurations, helping to maintain equipment integrity during demanding manufacturing processes.

## Technical Specifications

### Design Characteristics

- Forked top geometry
- Perforated structure
- Tapered body for secure fit

### Color Variants

Black, Red, Yellow, Green, Blue

## Application

### Primary Applications

Machinery Sealing • Equipment Protection • Connection Components
