

Rubber Conveyor Belt Vulcanizing Press

This rubber conveyor belt vulcanizing press is designed for splicing and repairing rubber conveyor belts. It utilizes hydraulic pressure and temperature control systems to ensure uniform heating and pressure distribution for reliable vulcanization.

Product Overview

Professional Conveyor Belt Splicing Solution

This rubber conveyor belt vulcanizing press is engineered for the reliable splicing and maintenance of heavy-duty industrial belts. It utilizes precise hydraulic pressure and advanced temperature control systems to ensure uniform heating across the entire joint. Designed for durability and performance, this machine is an essential tool for mining, logistics, and manufacturing environments that require consistent and efficient belt repair.

Technical Specifications

Key Components

- Heating platens
- Hydraulic pump unit
- Advanced control panel

Capabilities

Vulcanization • Belt Splicing • Belt Repair

Industry Applications

Mining, Manufacturing, Logistics
