

Rubber Diaphragm Valves for Fluid Control

These rubber diaphragm valves are designed for various industrial applications. They are made of flexible rubber material and control the flow of fluids or gases.

Product Overview

Industrial Rubber Diaphragm Valves

These rubber diaphragm valves are engineered for precise fluid and gas control in demanding industrial environments. Featuring a circular design with concentric ridges, they provide superior sealing capabilities and structural integrity under pressure. Constructed from high-quality flexible materials, they are optimized for applications requiring excellent resistance to corrosive media.

Technical Specifications

Design Features

- Circular geometry
- Concentric ridges for reinforcement
- High-performance sealing profile

Material Composition

Thermoplastics, Specialty Rubber

Performance Metrics

Suitability

Fluid Control • Gas Control • Corrosive Media
