

Rubber Encased Filter Screen

This filter screen is encased in a rubber surround. It is designed for filtration purposes in various applications and made of fine mesh material for effective particle separation.

Product Overview

Professional Rubber Encased Filter Screen

This high-quality filter screen features a durable rubber surround combined with an SS304 stainless steel mesh. Designed for precision filtration applications, it provides an effective seal and robust particle separation. The component is specifically engineered for water faucet filtration systems, ensuring reliable performance and longevity in domestic or industrial plumbing environments.

Technical Specifications

Materials	Silicon Rubber, SS304 Stainless Steel
Mesh Rating	30-60 mesh
Outer Diameter	24 mm
Applications	Filtration of water on water faucets
