

Rubber Material Applicator Machine

This rubber material applicator machine is designed for precise application of materials in rubber processing. It features a robust frame and adjustable application heads, ensuring accuracy and efficiency.

Overview

Precision Rubber Material Application

This specialized applicator machine is engineered for the precise gluing of rubberized cords onto cord drums. It supports a wide range of operational requirements, accommodating various perimeters, layers, and material widths. Designed for industrial efficiency and durability, the system features advanced automation control to ensure consistent, high-quality output in demanding manufacturing environments.

Key Features

Control System

Automation Control

Core Applications

- Gluing rubberized cord
- Cord drum processing
- Variable perimeter handling
- Multi-layer application

Performance Metrics

Operational Efficiency

100 %

Efficiency Level

Service Life

Extended service life for high-volume industrial use
