

Rubber Slab Cooling Machine

This rubber cooling machine efficiently cools rubber slabs using a multi-roller system. It ensures uniform cooling, preventing defects and maintaining consistent product quality.

Product Overview

High-Efficiency Rubber Slab Cooling

This rubber slab cooling machine is a specialized industrial solution designed to ensure consistent thermal management for rubber processing. Utilizing a multi-roller conveyor system, the unit facilitates uniform cooling of slabs to prevent material defects and maintain strict quality standards. It is engineered with a robust frame for durability and includes an integrated control panel for precise adjustments of speed and cooling parameters.

Technical Specifications

Control Parameters

- Variable cooling speed
- Temperature regulation

Primary Industry

Rubber Processing

Cooling Mechanism

Multi-roller system, Conveyor-based, Liquid/Air exposure

Construction

Robust heavy-duty frame designed for industrial use
