

# Rubber Track Pads for Construction Machinery

Heavy-duty rubber track pads are designed for use on construction machinery. These pads feature a durable rubber compound that provides enhanced grip and reduces ground damage.

## Product Overview

### High-Performance Rubber Track Pads

These heavy-duty rubber track pads are specifically designed for construction machinery such as excavators and loaders. Engineered with a durable rubber compound, they provide enhanced grip while significantly reducing ground damage on sensitive surfaces. The pads are reinforced with integrated metal mounting hardware to ensure a secure and reliable attachment to the track chain during intensive operations.

## Material Properties

### Performance Characteristics

Tear Resistance, Anti-Aging, High Tensile Strength, High Wear Resistance, Damping Effect

## Technical Specifications

### Model Series

600B

### Compatible Equipment

- Excavators
- Loaders
- Tracked Construction Machinery

### Mounting Hardware

Reinforced metal mounting hardware for track chain attachment

## Key Benefits

### Key Benefits

**1 Rating**

Enhanced Grip

**1 Impact**

Reduced Ground Damage
