

Rubber Vulcanizing Press - Y73 Series

The Y73 series rubber vulcanizing machine is designed for efficient and precise vulcanization of rubber products. This machine features a robust construction, ensuring stability and durability during operation.

Product Overview

Professional Rubber Vulcanizing Solution

The Y73 series vulcanizing press is engineered for high-efficiency processing of diverse rubber products. Featuring a dual-unit structure, it allows for independent or simultaneous operation to maximize manufacturing output within a compact footprint. Designed with a focus on stability, low noise, and energy efficiency, this machine provides reliable performance for industrial rubber production.

Technical Specifications

Control Capability

- Manual operation mode
- Semi-automatic operation mode
- Automatic operation mode

Operational Design

Dual-Unit Structure, Independent Operation, Simultaneous Operation

Performance Features

Key Performance Metrics

2 count

Processing Units

Efficiency & Safety

Low Energy Consumption • Low Noise • High Stability • Integrated Safety Systems
