

Rubberized Asphalt Production Plant

This rubber asphalt plant utilizes wet treatment design techniques for producing high-performance, resilient asphalt. The equipment ensures the creation of high-quality and durable asphalt roads through efficient mixing and blending.

Overview

High-Performance Rubberized Asphalt Production

The AR300 is a self-contained, portable system engineered for the efficient production of high-quality rubberized asphalt. Featuring a robust steel frame and integrated heating and mixing systems, it ensures precise blending of asphalt and crumb rubber. Its modular design facilitates easy transportation and rapid setup, making it an ideal solution for versatile road construction and maintenance projects.

Technical Specifications

Application Suitability

- Road Construction
- Road Maintenance
- Durable Paving Production

System Configuration

Portable, Self-contained

Frame Construction

Robust Steel Frame

Key Features

Automated Control, Integrated Heating, Modular Design, Portable
