

Sandstone Diamond Saw Blade

This diamond saw blade is designed for efficient and precise sandstone cutting. Its segmented rim enhances cooling and debris removal, while the high diamond concentration ensures a long blade life.

Product Overview

High-Performance Sandstone Cutting

These diamond saw blades are engineered specifically for the efficient and precise cutting of sandstone. Featuring a durable steel core and a segmented rim design, they provide enhanced cooling and superior debris removal during operation. With high-concentration diamond grit, these blades offer extended service life, making them an ideal choice for professional stone fabricators and construction applications.

Technical Specifications

Tool Compatibility

- Angle Grinders
- Circular Saws

Design Benefits

Enhanced Cooling • Efficient Debris Removal • Extended Blade Life

Primary Material

Sandstone

Key Features

Segmented Rim, Durable Steel Core, High-Concentration Diamond Grit
