

Satellite Communication Antenna

This antenna is part of a satellite communication system. It is designed for signal transmission and reception in remote and challenging terrains.

Overview

High-Performance Satellite Connectivity

This satellite communication system is engineered for reliable signal transmission and reception in remote and challenging environments. Featuring a robust parabolic antenna design and integrated telecommunications equipment, it provides a dependable solution for areas lacking conventional infrastructure. The system is built for durability and consistent performance, making it an ideal choice for critical communication needs in mountainous or isolated terrains.

Technical Specifications

Included Components

- Parabolic Antenna
- Mounting Structure
- Electronic Enclosures
- Telecommunications Equipment

Antenna Design	Parabolic Dish
Operational Environment	Remote Terrain, Mountainous, Outdoor
