

Satellite Dish Antenna

This satellite dish antenna receives and transmits satellite signals. It features a parabolic reflector to focus incoming radio waves onto the feedhorn, which then passes the signal to the LNB.

Product Overview

Compact Satellite Reception Solution

The KU60X65 satellite dish antenna is engineered for efficient signal reception and transmission, making it an ideal choice for satellite television, radio, and data services. Its compact design allows for optimized shipping logistics, enabling higher container load volumes and cost-effective distribution. Designed for durability, this antenna features a robust parabolic reflector and is suitable for outdoor installation on walls or roofs.
