

Satellite Dish Antenna

This satellite dish antenna is designed for receiving and transmitting satellite signals. It features a parabolic reflector made of mesh material, supported by a metal frame, and is mounted on a sturdy pole with an adjustable mechanism.

Product Overview

Professional Satellite Dish Antenna

This high-performance satellite dish antenna is engineered for reliable signal reception and transmission. Featuring a robust parabolic mesh reflector supported by a reinforced metal frame, it ensures structural integrity in various outdoor environments. The unit includes a precision-engineered mounting mechanism for accurate satellite alignment, making it an ideal solution for telecommunications, internet connectivity, and professional broadcasting applications.

Technical Specifications

Reflector Material	Mesh
Frame Material	Metal
Mounting System	Pole-mount with precision adjustment

Applications

Primary Applications	Satellite Broadcasting, Internet Access, Communication Systems
