

Satellite Signal Receiving Antenna

This circular satellite antenna is designed for receiving satellite signals. It is constructed from durable materials to withstand environmental conditions and ensure long-lasting performance.

Product Overview

Satellite Signal Receiving Antenna

This circular satellite antenna is specifically engineered for high-performance signal reception. Designed with a clean, flat white surface, it features integrated mounting points for easy and secure installation. Constructed from durable, weather-resistant materials, it ensures consistent operation even in challenging environmental conditions for various communication applications.

Technical Specifications

Form Factor	Circular
Material Grade	Weather-resistant, Durable

Installation

Installation Requirements

- Integrated mounting points
- Suitable for fixed installations

Mounting Capability	Yes
