

SC300.8 Hydraulic Excavator

The SC300.8 Excavator is a robust construction machine designed for heavy-duty excavation tasks. It features a powerful hydraulic system for efficient digging and lifting.

Overview

Built for Heavy-Duty Performance

The SC300.8 hydraulic excavator is engineered for high-intensity construction and earthmoving tasks, prioritizing raw power and operational efficiency. It features an advanced Cummins engine and a high-capacity hydraulic system to ensure consistent productivity in demanding environments. Designed with operator comfort and maintenance convenience in mind, this machine offers a robust working device and optimized structural components for extended service life.

Performance

Rated Power

198 KW

Rated Power

Hydraulic Pump Capacity

530 l/min

Flow Rate

Technical Features

Key Technical Features

- Intelligent electronic control technology
- Advanced cushion valve for improved operation
- Optimized arm and boom length for durability
- Reinforced working device

Operator Experience

Cabin & Control

Open field vision, Climate-controlled HVAC, Intelligent operation, Easy maintenance access
