

# Screw Extractor Set with Separate Drill Bits

This screw extractor set features separate drilling and extracting bits for removing damaged or stripped screws. The set includes various sizes to fit different screw diameters and is constructed from high-strength steel.

## ADDITIONAL IMAGES

## Product Overview

### Professional Damaged Screw Removal

This high-performance screw extractor set features a specialized two-stage system with separate drilling and extracting bits for maximum efficiency. Engineered for durability, the bits are constructed from premium S2 steel with an AlTiN surface treatment to withstand high torque and resist wear. The system is designed to quickly and reliably remove damaged, stripped, or broken screws, bolts, and studs in both professional and demanding DIY environments.

## Technical Specifications

### Surface Coating

AlTiN

### Sizes

- 1#
- 2#
- 3#
- 4#

### Material

S2 Steel

## Usage Information

### Primary Applications

Damaged screws, Stripped screws, Broken studs, Broken bolts, Socket screws

## Packaging

### Packaging Type

Double blister card
