

Sealless Magnetic Drive Pump

This magnetic drive pump is designed for a wide range of industrial applications. Its sealless design eliminates the risk of leakage and reduces maintenance costs.

Overview

High-Performance Sealless Magnetic Drive Pump

The QHX series magnetic drive pump is engineered for high-performance industrial applications where reliability and safety are paramount. Its sealless design completely eliminates the risk of leakage, significantly reducing maintenance requirements and operational costs. Constructed from durable, corrosion-resistant materials, this pump is an ideal solution for transferring chemicals and corrosive fluids in demanding environments.

Technical Specifications

Fitting Size	40 mm
Design Type	Sealless Magnetic Drive

Key Features

Performance Attributes	Corrosion-Resistant, Leak-Free, Low Maintenance, Industrial Grade
------------------------	---

Applications

Suitable Fluids

- Corrosive fluids
- Chemicals
- Liquids requiring contamination control
