

Sectional Water Tank

This sectional water tank is designed for storing large volumes of water. Its modular panels are bolted together on-site, enabling flexible sizing and easy installation.

Product Overview

Modular Sectional Water Storage Solution

This sectional water tank is engineered for high-capacity storage in industrial, commercial, and municipal environments. Constructed from modular panels, the system allows for flexible sizing and straightforward on-site assembly, making it ideal for locations with limited access. Its robust design ensures reliability for critical applications such as potable water storage, fire suppression systems, and large-scale irrigation.

Technical Specifications

Material Composition	Fiberglass Reinforced Plastic (FRP) Composite
Construction	Modular bolted panel system
Structural Features	Reinforced Ribs, Modular Panels, Bolted Assembly

Application & Use

Recommended Applications

- Potable Water Storage
- Fire Suppression Systems
- Industrial Water Supply
- Agricultural Irrigation
- Commercial Facility Storage

Key Benefits

Flexible Sizing • Easy Transportation • Simplified Maintenance • High Structural Integrity
