

Segmented Diamond Saw Blade

This is a diamond circular saw blade utilizing a segmented design. It is cool pressed for general-purpose cutting of concrete, granite, marble, and stone.

Product Overview

Professional Segmented Diamond Saw Blade

This segmented diamond saw blade is precision-engineered for the rapid and efficient cutting of concrete, masonry, and various stone materials. The specialized segmented rim design promotes superior cooling and debris clearance, significantly reducing the risk of blade warping during heavy-duty applications. Constructed with a durable steel core and premium diamond grit, this tool is optimized for the demanding environments of demolition and professional masonry construction.

Technical Specifications

Model ID	CCS.101
Recommended Materials	Concrete, Stone, Masonry

Performance Features

Key Advantages

- Segmented rim for rapid material removal
- Advanced heat dissipation to prevent warping
- Durable steel core construction
- High-quality diamond grit for aggressive cutting

Industry Usage

Construction • Masonry • Demolition
