

Segmented Diamond Saw Blade

This blade is designed for cutting hard materials such as concrete, stone, and masonry. The segmented design facilitates air cooling, which reduces heat buildup and extends the blade's life.

Product Overview

Professional Segmented Diamond Blade

This high-performance segmented diamond blade is engineered for cutting tough construction materials including concrete, stone, and masonry. Featuring a durable steel core with precision-brazed diamond-impregnated segments, it offers exceptional cutting efficiency and long-lasting durability. The segmented design promotes superior air cooling to minimize heat buildup during operation, ensuring optimal performance across various power tools like angle grinders and circular saws.

Technical Details

Blade Type

Segmented • Diamond-Impregnated

Diameter

180 mm

Diameter

Compatible Tools

Angle Grinders, Circular Saws

Customization

Available Options

- Custom Arbor Sizes
- Variable Segment Specifications
