

# Segmented Rim Diamond Saw Blade

This diamond saw blade is designed for cutting hard materials such as concrete and stone. It features a segmented rim for efficient cutting and cooling and a durable steel core for stability.

## Product Overview

### Professional Segmented Rim Diamond Saw Blade

This high-performance diamond saw blade features a segmented rim design optimized for rapid cutting and efficient cooling. Engineered with a durable steel core, it provides the stability and longevity required for demanding construction environments. It is an ideal solution for cutting through hard materials including concrete, brick, and stone.

## Technical Specifications

Blade Type	Segmented Rim
Compatible Materials	Concrete, Brick, Stone

## Applications

### Primary Applications

- Wall cutting
- Bridge construction
- General concrete building applications
