

Segmented Turbo Grinding Wheel - 125mm Diameter

This grinding wheel is designed for efficient material removal and surface preparation. Its segmented turbo design enhances cooling and dust extraction.

Product Overview

Professional Grinding Performance

The 125mm Segmented Turbo Grinding Wheel is engineered for heavy-duty material removal on challenging surfaces like concrete, marble, tile, and rock. Its specialized turbo-rim design ensures efficient cooling and dust extraction, while the heat-treated #45 steel body provides superior durability for demanding industrial applications. Designed for versatility, this tool is compatible with angle grinders and specialized floor grinding machinery for both wet and dry operation.

Technical Specifications

Key Dimensions

125 mm Diameter	20 mm Segment Height	22.23 mm Bore Diameter
---------------------------	--------------------------------	----------------------------------

Construction Materials	Diamond, Alloy, #45 Steel
-------------------------------	---------------------------

Production Method	Cold or Hot Pressed
--------------------------	---------------------

Performance

Suitable Surfaces

- Concrete
- Marble
- Tile
- Rock

Machine Compatibility

Grinding Machines • Angle Grinders
