

Self-Centering Probe Stylus for Coordinate Measuring Machines

This self-centering stylus is used with coordinate measuring machines and similar instruments. It accurately locates the center point of features, such as grooves or holes, on a workpiece.

Product Overview

Precision Centering for Metrology

This self-centering probe stylus is an essential tool for high-precision coordinate measuring machines (CMM). It is expertly engineered to accurately locate the center point of various workpiece features, including grooves and complex holes. By facilitating precise alignment, this stylus is indispensable for quality control and dimensional inspection in advanced manufacturing environments.

Technical Features

Primary Function	Feature centering and hole/groove location
Compatibility	CMM, Precision Measurement Instruments
Tip Geometry	Conical or pointed

Application

Industry Applications

- Quality Control
- Dimensional Accuracy Verification
- Manufacturing Metrology
