

Self-Contained Air Conditioning Unit

This is a self-contained air conditioning unit. It is designed for efficient cooling and dehumidification.

Overview

Compact Cooling Solution

This self-contained air conditioning unit is engineered for efficient cooling and dehumidification in compact spaces. It features a robust design with a finned coil heat exchanger and high-quality copper tubing for optimal thermal transfer. An integrated electronic control panel allows for precise adjustments of temperature and operating functions, making it a reliable choice for professional climate control applications.

Technical Specifications

Key Components	Finned coil heat exchanger, Copper tubing, Condensate drain pan
Control System	Electronic control panel

Features

Primary Functions

- Efficient cooling
- Dehumidification
- Temperature regulation

Unit Design

Self-contained • Compact
