

Self-Drilling Concrete Anchors

These anchors feature a pronged body for drilling directly into surfaces. They offer improved expansion with an internal thread and plug, accommodating hex bolts, studs, and hook bolts.

Product Overview

High-Efficiency Self-Drilling Concrete Anchors

These advanced self-drilling anchors feature specialized prongs at the tip, allowing them to create their own holes directly during installation. This improved expansion design ensures a flush finish on the concrete surface, maintaining a clean aesthetic for your projects. Compatible with various fasteners including hex bolts, studs, and hook bolts, they offer versatile mounting solutions for light to medium-duty applications.

Technical Specifications

Key Features

- Integrated drill tip
- Internal thread design
- Flush surface finish
- Improved expansion mechanism

Compatible Fasteners

Hex Bolt, Stud, Hookbolt

Anchor Type

Expansion Anchor with Internal Thread and Plug
