Product Overview

Professional Self-Drilling Solutions

These self-drilling hex washer head screws, also known as Tek screws, are engineered to streamline installation by eliminating the need for pre-drilled holes. Featuring a specialized drill-shaped point and a robust double-thread design, they offer rapid engagement and superior holding power across metal, wood, and plastic substrates. The integrated washer provides a reliable seal and broad bearing surface, ensuring structural integrity and corrosion resistance in demanding construction applications like roofing and siding.

Technical Specifications

Head Style	Hex Washer Head
Thread Configuration	Double thread
Material	Hardened Steel, Corrosion-resistant coating

Performance Features

Key Advantages

- Eliminates need for pre-drilling
- Integrated washer for leak prevention
- Large bearing surface prevents over-tightening
- Optimized for quick and secure engagement

Applications	Roofing, Siding, Metal to Metal, Metal to Wood
