

# Self Leveling Concrete Floor Truss Screed

This self leveling concrete floor truss screed is designed for precise leveling of concrete surfaces. It features an adjustable mechanism and robust frame for optimal performance.

## Overview

### Professional Concrete Truss Screed

This high-performance truss screed is designed for professional concrete compaction, leveling, and tamping. It features a robust, corrosion-resistant steel framework capable of spanning up to 18 meters, ensuring versatility for various construction sites. Equipped with precision-engineered components, this equipment optimizes workflow efficiency while significantly reducing maintenance costs through its modular, easy-to-assemble design.

## Technical Specifications

### Available Models

- OKS-55
- OKS-90

Maximum Working Length	18 m
Arch Adjustment Range	10-30 degrees
Spindle Tolerance	0.05 mm

## Construction Quality

### Construction Highlights

Heavy-duty steel frame, NSK earthquake-resistant bearings, Anti-rust surface spray, Modular assembly, Universal joints
