

Self-Leveling Rotary Laser Level for Construction

The self-leveling rotary laser level is a precision instrument for horizontal and vertical alignment. It features automatic self-leveling and emits a 360-degree laser beam.

Product Overview

Precision Leveling Solution

This self-leveling rotary laser level is a professional-grade instrument engineered for high-accuracy horizontal leveling and vertical alignment. Designed for demanding construction and surveying environments, it automatically self-levels to ensure precision even on uneven terrain. The unit projects a continuous 360-degree laser beam, providing a reliable reference plane for foundation work, framing, and ceiling installations.

Technical Specifications

Wavelength	635 nm
Max Laser Output	< 1mW

Features & Safety

Safety Warnings

- Caution: Laser Radiation
- Do not stare into beam

Key Features	Self-Leveling, 360-Degree Beam, Adjustable Feet, Durable Housing
--------------	--

Applications

Ideal Applications

Foundation Work • Framing • Ceiling Installation • Surveying
