

Self-Locking Hex Nuts with Toothed Flange

These self-locking hex nuts have an internal toothed flange for a strong grip. They are suitable for applications needing secure, vibration-resistant connections.

Product Overview

High-Performance Fastening Solution

These self-locking hex nuts with toothed flanges are engineered for demanding applications where vibration resistance is critical. The integrated toothed flange design provides an enhanced grip on mating surfaces, significantly reducing the risk of loosening over time. Crafted with a corrosion-resistant finish, these fasteners offer reliable durability and long-term performance in various industrial environments.

Technical Specifications

Finish

Corrosion-Resistant

Fastener Type

Self-Locking Hex Nut with Toothed Flange

Locking Mechanism

Integrated Toothed Flange

Primary Applications

Vibration Resistance, Secure Connections, Industrial Assembly
