

Self-Lubricating Bronze Bushing with Graphite Plugs

This bronze bushing is engineered with graphite plugs to provide self-lubrication. It is ideal for high-load, low-speed applications where external lubrication is difficult.

Product Overview

High-Performance Self-Lubricating Bushing

This self-lubricating bronze bushing is engineered with integrated graphite plugs designed to minimize friction in challenging industrial environments. It is specifically optimized for high-load, low-speed applications where manual or external lubrication is impractical. The graphite inserts provide a consistent, continuous lubrication layer, effectively extending the operational lifespan of machinery and significantly reducing routine maintenance requirements.

Technical Features

Lubrication Method

Self-Lubricating • Graphite Embedded

Advantages

- Reduced friction during operation
- Continuous self-lubrication
- Extended component lifespan
- Reduced maintenance intervals

Operational Suitability

High Load, Low Speed, Hard-to-reach areas
