Product Overview

High-Performance Jet Pump

The JET-L series is a robust injection-type clean water pump designed for efficient water boosting and transfer. Constructed with a durable cast iron body, this pump ensures longevity and corrosion resistance, making it ideal for domestic water supply, garden irrigation, and pressure boosting systems. Its advanced design allows for rapid self-priming, reliable performance, and high-head operation, even when drawing from wells or tanks.

Technical Specifications

Model	JET 100A
Body Material	Cast Iron
Pump Type	Self-priming Jet Pump
Safety Features	Thermal Overload Protection, Corrosion Resistant

Applications

Primary Applications

- Domestic water supply
- Well water extraction
- Pressure boosting systems
- Garden irrigation
- Water transfer from tanks

Fluid Compatibility

Compatible Liquids

Clean Water • Non-aggressive liquids
