

Self-Priming Centrifugal Water Pump with Pressure Tank

This self-priming centrifugal pump is designed for water boosting and distribution. It features a robust motor for reliable performance and a pressure tank to maintain consistent water pressure.

Overview

Reliable Water Boosting Solution

This self-priming centrifugal pump with an integrated pressure tank is engineered for efficient water boosting and distribution. Designed for both residential and light commercial applications, the system ensures consistent water pressure and reliable performance. It comes complete with necessary fittings, allowing for straightforward installation and seamless integration into existing water supply lines.

Technical Specifications

System Components

- Centrifugal Pump
- Pressure Tank
- Electric Motor
- Plumbing Fittings

Pump Type	Self-priming centrifugal
------------------	--------------------------

Applications

Suitable Applications	Residential, Light Commercial, Water Boosting, Water Distribution
------------------------------	---

Features

Key Benefits

Self-priming capability • Consistent pressure maintenance • Easy installation • Robust motor design
