

Self-Priming DC Oil Transfer Pump

This self-priming, positive displacement pump is designed for transferring oil and other viscous fluids. Operating on 12V or 24V DC power, it offers reliable performance and efficient fluid transfer in demanding environments.

Product Overview

Professional Fluid Transfer Solution

The YB1224B is a high-performance self-priming, positive displacement pump engineered for the efficient transfer of oil and viscous fluids. Designed for versatility, this pump operates on flexible 12V or 24V DC power and features a durable, robust construction for demanding professional environments. It is an ideal solution for applications ranging from routine oil changes and fuel transfer to complex fluid circulation tasks.

Technical Specifications

Power Compatibility	12V DC, 24V DC
Pump Type	Positive Displacement
Self-Priming Capability	Yes

Key Features

Core Features

- Durable motor and pump head construction
- Battery clips included for quick connection
- Engineered for viscous fluid handling

Suitable Applications

Oil Changes • Fuel Transfer • Fluid Circulation
