

Self-Priming Electric Water Pump

This self-priming jet pump is engineered for efficient water transfer and pressure boosting. Its design ensures consistent water flow and reliable self-priming capabilities, making it ideal for domestic water supply and irrigation.

Product Overview

Self-Priming Jet Pump Performance

The JET100B-1 is a self-priming jet pump engineered for efficient water transfer and reliable pressure boosting. Its robust construction ensures durability, while the specialized jet design maintains consistent flow and pressure even when the water source is located below the pump level. This unit is an ideal solution for domestic water supply, irrigation, and general-purpose pumping requirements.

Technical Specifications

Model	JET100B-1
Pump Type	Self-Priming Jet Pump

Features

Operational Advantages

- Robust construction for durability
- Consistent water flow and pressure
- Reliable self-priming capabilities
- Suitable for water sources below pump level

Ideal Applications	Domestic Water Supply, Irrigation, Pressure Boosting, General Purpose Pumping
