

Self-Priming Peripheral Water Pump

This self-priming peripheral pump is engineered for clean water transfer and pressure boosting. Its robust motor, durable housing, and efficient impeller ensure reliable performance and long life in various applications.

Overview

Self-Priming Peripheral Water Pump

This self-priming peripheral pump is engineered for efficient clean water transfer and pressure boosting. It is suitable for a wide range of domestic and light industrial applications, including irrigation, water supply, and pressure maintenance systems. Built with a robust motor and a durable pump housing, it ensures reliable performance and a long service life.

Key Features

Design Highlights

- Self-priming capability
- Robust motor construction
- Durable pump housing
- Efficient impeller design

Suitable Applications

Domestic Water Supply, Light Industrial, Irrigation, Pressure Boosting

Performance

Compatible Fluid

Clean Water
