

Self-Priming Water Transfer Pump

This self-priming pump facilitates efficient water transfer and fluid handling. Its metallic housing ensures durability in demanding environments, while the self-priming capability allows for easy start-up.

Product Overview

Professional Water Transfer Solution

This self-priming water transfer pump is engineered for efficient fluid handling in demanding environments like irrigation and construction sites. Featuring a robust metallic housing and a versatile belt-driven pulley system, it offers reliable performance across various power source configurations. Designed for ease of use, it allows for rapid start-up without manual priming and includes maintenance-friendly features like an integrated drain plug.

Technical Specifications

Priming Mechanism	Self-priming
Drive System	Belt-driven pulley
Housing Material	Metallic
Ideal Applications	Irrigation, Construction, General Water Pumping

Design & Maintenance

Key Maintenance Features

- Drain plug for easy winterization
- Threaded inlet/outlet ports
- Stable base for vibration reduction
