

Self-Propelled Aerial Work Platform

This self-propelled aerial work platform is designed for accessing high areas in construction and maintenance. It features a wheeled base, vertical mast, and railed platform with controls.

Product Overview

High-Reach Precision

This self-propelled aerial work platform is engineered for safe and efficient access to elevated areas in construction, maintenance, and warehousing environments. Featuring a compact, maneuverable base and a robust vertical mast system, it provides a stable solution for personnel working at height. The electric-powered design ensures quiet, emission-free operation, making it ideal for indoor applications where air quality and noise control are critical.
