

Self-Propelled Aerial Work Platform

This lift-assisted platform features automatic walking functionality, eliminating the need for external power or traction. It is mobile, flexible, easy to operate, and allows for effortless lifting by a single person.

Product Overview

Self-Propelled Aerial Work Platform

This series of lift-assisted self-propelled work platforms features an automatic walking function, allowing for efficient operation without external power supplies or traction. Designed for flexibility and ease of use, a single operator can manage forward, backward, turning, and lifting movements, significantly reducing labor requirements. It is an ideal solution for high-altitude operations in environments such as stations, terminals, airports, stadiums, and large industrial enterprises.

Key Features

Application Areas

- Factories and workshops
- Docks and terminals
- Airports
- Stadiums
- Large-scale construction

Operational Capabilities

Self-propelled, Automatic walking, Single-operator control, No external power required, Flexible maneuverability

Technical Specifications

Model Identifiers

SJY (II) • X21M • PU225

Performance Metrics

1 person

Required Operators
