

Self-Propelled Aerial Work Platform

This self-propelled aerial work platform is used for maintenance and installation tasks. It features a caged platform, hydraulic lift, and wheels for maneuverability.

Overview

Professional Aerial Work Platform

The GTS6 self-propelled aerial work platform is designed for safe and efficient vertical access in industrial and maintenance environments. Featuring a robust hydraulic lift mechanism and a secure operator cage, it provides reliable elevation for installation and repair tasks. Its maneuverable design and integrated safety markings make it an essential tool for high-reach operations.
