

# Self-Propelled Corn Harvester

This self-propelled corn harvester features a multi-row harvesting head and a conveying system. It elevates harvested corn to a holding bin, streamlining the harvesting process.

## Overview

### High-Efficiency Corn Harvesting

This self-propelled corn harvester is engineered for large-scale agricultural operations, featuring a robust multi-row harvesting head designed for simultaneous row processing. The integrated conveying system ensures efficient transfer of harvested material into the high-capacity rear-mounted holding bin. Built on a durable tractor-style chassis with a powerful diesel engine, this machine provides the reliability and automation required for demanding harvest seasons.

## Technical Specifications

Machine Type	Self-Propelled Corn Harvester
Engine Type	Diesel

## Performance Features

### Operational Metrics

**4 rows**

Row Capacity

Harvesting Capability	Multi-row harvesting, Automated conveying, Rear-mounted storage
