

Self-Propelled Vertical Mast Lift

This is a self-propelled order picker designed for warehouse and industrial applications. It features a vertical mast for lifting personnel or materials to elevated positions.

Overview

Efficient Vertical Access

This self-propelled vertical mast lift is engineered for high-efficiency operations in warehouse and industrial environments. Designed for tasks such as order picking, routine maintenance, and stocktaking, it provides a stable and secure elevated platform for personnel. With its compact footprint and maneuverable design, it is an essential tool for optimizing workflow in distribution centers.

Technical Specifications

Mobility

Self-Propelled • Wheeled

Power Source

Electric

Primary Applications

Order Picking, Maintenance, Stocktaking, Warehouse Operations

Safety & Design

Key Safety Features

- Enclosed safety rails
- Self-propelled mobility
- Vertical mast stabilization
