

Self-Propelled Vertical Mast Lift

This is a self-propelled aerial work platform designed for indoor use on smooth, level surfaces. It features a telescoping mast for vertical lifting, allowing workers to reach elevated areas for maintenance, installation, or repair tasks.

Overview

Versatile Vertical Access Solution

This self-propelled vertical mast lift is engineered specifically for efficient indoor operations on smooth, level surfaces. Featuring a reliable telescoping mast design, it provides safe and stable elevation for maintenance, installation, and repair tasks. The unit combines essential safety features, such as integrated railings and a user-friendly control panel, with high maneuverability to enhance workplace productivity.

Technical Specifications

Operation Type	Self-propelled
Mast Type	Telescoping

Usage Environment

Primary Applications

- Facility Maintenance
- Equipment Installation
- Repair Services

Environment	Indoor Use, Smooth Surfaces, Level Surfaces
