Product Overview

High-Efficiency Production

This semi-automatic face mask production machine is engineered for the reliable and efficient manufacturing of disposable face masks. Designed with a robust aluminum frame and precision mechanical components, it provides consistent material handling through integrated feeding, folding, and cutting stages. The machine is an ideal solution for small to medium-scale operations, offering a mobile design mounted on caster wheels for flexible placement in your production facility.

Technical Features

Operational Systems

- Material feeding mechanism
- Forming section
- Output conveyor
- Adjustable tension controls
- Synchronized motorized drive system

Ideal Scale

Small-scale operations • Medium-scale operations

Frame Construction

Aluminum, Durable Frame, Precision Components

Portability

Yes

Quality Assurance

Quality Control

Tested by quality auditors to ensure defect-free production according to industry standards.
