

Semi-Automatic KN95 Mask Production Machine

This semi-automatic KN95 mask machine is designed for high-speed production. It features a stainless steel body and Taiwan ultrasonic machine, offering stable operation and firm welding.

Product Overview

High-Efficiency Mask Production

The T-31 is a semi-automatic production machine engineered for high-speed manufacturing of KN95 masks. Featuring a robust stainless steel body, it provides exceptional stability and consistent output during operation. The system utilizes advanced ultrasonic technology to ensure reliable, firm welding, making it a dependable solution for large-scale mask production.

Performance Metrics

Production Capacity

600000 pcs/day
Output

Technical Specifications

Total Power Consumption	10 kW
Ultrasonic Power	4.2 kW
Weight	4.2 tons
Dimensions (L x W x H)	3.3M x 1.58M x 1.9M

Key Features

Machine Advantages

- High-speed semi-automatic operation
- Durable stainless steel construction
- High-performance ultrasonic welding system
- Stable and easy-to-use control interface
